Chairs & Armchairs : HEE Lounge Chair by HAY, comfort at its best

HEE Lounge Chair by HAY, comfort at its best

HEE Lounge was born from the ambition to create a chair favorable to the environment, where the materials are easily recyclable. Creating a chair for one single material, we avoid transport polluting between different production sites, and at the same time that facilitates the recycling of material.

The philosophy asserted during the creation of **HEE Chairs range**, was to choose an existing concept - here, the chair -, and perfecting it in every single detail by lifting the design up a level, simplifying it, and improving the usability.

The proof: **its low and broad base is ultra-comfortable, for a maximum relaxation!**

The production was optimized in order to harmonize design and production, and to find exactly the right thickness of the metal wire. The chair is made from 11 mm metal wire, and the form refers to a sketch - a pencil drawing in three dimensions.

- Design Hee Welling

Chairs & Armchairs : Nobody has got a baby brother, Little Nobody by HAY

Nobody has got a baby brother, Little Nobody by HAY

Danish design duo Komplot is the first to create an industrially produced chair **made strictly from textile**. The chair **LITTLE NOBODY** is molded in one piece and in one single process resulting in a simple, light weight and stackable chair meeting modern demands of sustainability in both materials and production.

In its form **LITTLE NOBODY** refers to a piece of cloth laid over a chair to cover and protect it. As the chair underneath the cover is removed the cover remembers the shape of the chair and it has become the bearing structure of the chair itself. Hence the name **NOBODY** or **NO BODY**. At the same time the name refers to the shadow side of a chair while not in use.

With **LITTLE NOBODY** designers Boris Berlin and Poul Christiansen turn the idea of modernism upside down. Upholstery was never accepted as good taste by modernists as it covers up the basic structure of the chair, but while respecting modernist ideas of simplicity, lightness and new forms of mass production, Komplot removes the frame in favor of the upholstery turning it into bearing structure itself.

JW01 Chair by HAY is comfortable and ergonomic	ME-0020-EX	208,19	249,83

Chairs & Armchairs : Chair SPIDER WOMAN is gracious and light

Chair SPIDER WOMAN is gracious and light

The asymmetrical pattern gives this **SPIDER WOMAN CHAIR** spatial freedom and hence the chair is less in need of neat positioning than symmetrical chairs. The pattern points towards an infinite vanishing point and the transparency adds lightness to a material normally perceived as heavy and impenetrable. The eyes and legs as well as the grid on the shell bear the reference to a spider woman and her web.

SPIDER WOMAN is a stackable chair for outdoor and indoor use.

-Design : Louise Campbell

RAY Lounge Chair by HAY: comfortable and deep	ME-00118	743,31	891,97

Chairs & Armchairs : Lounge chair Blow refers to the classic bean bag

Lounge chair Blow refers to the classic bean bag

The idea for the chair evolved from a wish to improve and industrialize the expensive process of upholstery of furniture where much of the work is done by hand. With Blow designers Foersom and Hiort-Lorenzen have taken on the challenge of reversing the moulding process in order to facilitate mass production, that is to cover the mould with the fabric and shoot the foam into the fabric rather than covering the set foam with fabric. This technology is used by the car industry to make seats firm but without losing the softness.

- Design Foersom & Hiort-Lorenzen

Chairs & Armchairs : The C09 Chair is out of Carbon fiber

The C09 Chair is out of Carbon fiber

An exceptional material for this chair of exception, clearly transgressive, the **C09**.

The material used:

The Carbon fibre is a material being composed of extremely fine fibres, between 5 and 15 microns diameter, and made up mainly of carbon atoms. The carbon fibres are characterized by their weak density, their strength raised to traction and compression, their flexibility, their good conductibilities electric and thermal, their behaviour in temperature.

The A380 Airbus would never have flown if it had not profited from the lightening and the rigidity of many carbon fibre elements. The Carbon fibre is also used for the vehicles with high efficiencies and auto industry; the aircraft industry and space ; sports equipment such of the sporting arcs and arrows; tennis rackets, the windsurfing wishbones ; the executives of the bicycles of competition on roads and bicycle any ground, the sailplanes, the sailing ships of competition, this is a long list!

If a spot persists, it is necessary to use the side ?scraper? of sponge and soapy water.

Don't you know this material? New : ask your Corian® free sample here.

Thank you contact us with any questions or specific quotation.

See there for Pol Quadens' biography.

"There is some feeling of revolt when you choose to be a designer, to change things it is necessary to be in dissension with what exists. It is necessary to have reasons to change this world.

I observe, I scan, my curiosity analyzes what surrounds me, then I seek, I discover materials, techniques, I learn, I try to apply new solutions of production to my ideas, my will of changes.

I work a lot with composite materials, they leave me an almost limitless creative freedom.

Other new materials like Corian® which one can work at will, is located halfway between primary materials - steel, wood - and tertiary materials - the composites. The touch, transparency, surface qualities give to creations a kind of new luxury, the kind that seduces the first sense of approach of an object: sight and touch

I have a project of architecture using this material, it will be a first in Belgium.

MATELUX: glass 10 mm, tempered, colored and acid-etched

HPL (TRESPA®): *High Pressure Laminate*: a laminate protected by a polymer from recovery in layer or a plasticizer. Following an application of heat under pressure to the various layers, one obtains an offering laminate of the thermoplastic properties, a better potential of postformage and an important reduction of the release of volatile organic materials in the course of formation.

To summarize these technical details, a very solid laminate, very resistant to heat, UV, the bad weather?

Coffee Tables : FISH Coffee table - white Corian® and smooth line

FISH Coffee table - white Corian® and smooth line

FISH is a coffee table as we like them: beautiful, smooth and especially? PRACTICAL: it has a storage space for magazines.

The material used:

Corian® is a composite manufactured by Dupont de Nemours. Matt, it is easily cleanable and does not stain in-depth. Use soapy water and a sponge.

If a spot persists, it is necessary to use the side scraper of sponge and soapy water.

Coffee Tables : Coffee table BLOKK

Coffee table BLOKK

Choose the color of the concrete, the quality of the metal of the sliding parts: coffee table **BLOKK** is unique. **Designed and made in France.**

Materials used:

Stainless steel is brushed with natural grain 220 and is left natural.

The concrete is a waxed concrete applied on a wood basis. 8 layers (of which 2 of concrete) of 4 different products allow a sealing of wood and concrete in order to allow a good domestic use and an easy maintenance. It will have simply to be waxed approximately every 3 months with a colourless traditional liquid wax.

Lights : CORD LAMP table lamp

CORD LAMP table lamp

You can keep letting it irritate the hell out of you. Break your neck tripping over it. Or surrender, hide it behind the skirting board or press it into a groove. But it's smarter to make friends with the enemy, as so amusingly illustrated by cord light, which turns the cursed flex cord into a simple eye catcher.

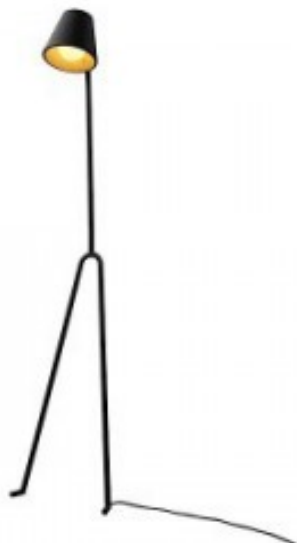

We probably shouldn't claim that the lamp conveys a message, but just for fun, how about make peace not war. From a snake nest of winding cords, this lamp shoots straight up and stands tall on its own. Surprising the eye by challenging the unexpected, the Cord Light is simple, yet characteristic.

The cord, one of the most disturbing decorating details has been made useful. The piece is made out of a standard bulb (included), textile cord and steel tube.
